Israeli Computer Parts Pricing Analysis
658 products from Ivory.co.il | 2026-02-02

Methodology

Data Collection: Products scraped from ivory.co.il category pages

US Price Estimation: Google Gemini 2.0 Flash AI model estimates US retail prices based on product specifications and current market data. A two-pass verification process is used to improve accuracy.

Price Ratio: Israeli price (converted to USD) divided by estimated US RRP. A ratio of 1.0x means price parity; 2.0x means Israeli price is double US retail.

Limitations: US RRP estimates are AI-generated and may not reflect exact current prices. Exchange rates fluctuate. This analysis represents a point-in-time snapshot.
